

Lap Belt Cinch, Inc.

Creator and Supplier of CG-Lock Occupant Stability Equipment

CG-LOCK® CAPABILITIES

Vastly improved stability, comfort, and safety for the mobility impaired

The CG-LOCK

+

The seatbelt that is *already* in the vehicle

=

Equals Greater stability, comfort, and safety for paraplegics, quadriplegics, lower limb amputees, people with cerebral palsy and polio, and the frail and elderly

The CG-Lock Mobility Aid:

- Attaches in about one minute to most vehicle seatbelts with no tools. A portable version is also available (e.g.: for taxis)
- When attached, it “locks” the person’s hips in place providing great stability and comfort when riding or driving (please see other side)
- Professional, press, and user feedback has been outstanding (see other side)
- Has been successfully “Crash Tested” (Federal NHTSA FMVSS 208 and other) and demonstrated to *increase* the safety of the seatbelt
- Costs \$40 or less. Production rates of 5,000 per week per shift. 10,000 in inventory now.
- Proven in other applications since 2004 (see other side)

Sit still...drive faster....buckling up will never be the same!

- Since the CG-Lock is proven to hold adults tightly and comfortably during hard cornering and braking, think how wonderful the stability benefits will be for:

- Lower limb amputees
- Paraplegics and quadriplegics
- People with polio and cerebral palsy
- Post-surgical patients (back, leg, abdominal, hip)
- The elderly and frail

 Subject: Proof that CG Lock make you Grin.

Thought you might like to see this photo.

This gentleman has lost both legs above the knee, so hence has no sitting balance. He reports that sitting in the passenger seat is difficult as he constantly falls over, yet we had him driving using just his hands and no bracing other than CG lock. The gentleman said he never felt as secure even when he had legs!

Will give more in depth feedback later...

 CG-Lock

Stand: C3
 A breakthrough product called the CG-Lock has just been developed that greatly increases your stability and control whilst sat in your car seat. The CG-Lock can secure your center of gravity giving you more confidence, comfort and control. This amazing little device fits on your existing seatbelt in five minutes with no drilling and is fully removable in seconds. The CG-Lock allows you to secure yourself across the hips, tightly restraining only the pelvis while allowing full upper body mobility.
 Andrew Ellis, Fleet Supervisor and Driving Assessor at the Queen Elizabeth's Foundation Mobility Centre, complimented the invention: "Stability leads to control and from control comes confident, safer driving...for people with a normal spine structure, and full contact with the seat back the CG-Lock really works"
 Customer comments have been positive too, with one user remarking "The CG-Lock gave me much more confidence when cornering as it held me firmly in the seat. No more sliding on bends. It was very comfortable and easy to use"
 Try the CG-Lock at your nearest mobility center to see if it can benefit you www.mobility-centres.org.uk
